

**1ST NATIONAL COMPANY WITH WHO PREQUALIFICATION
(GENEVA), HAS NOW RECEIVED LICENSES TO SUPPLY THE
LATEST COVID-19 ORAL MEDICINES FOR AROUND 100
COUNTRIES INCLUDING PAKISTAN**

Remington Pharmaceuticals has been granted licenses to develop, manufacture, and supply generic versions of the world's novel two oral treatments for COVID-19, by Medicines Patent Pool (MPP), making it the first and only Pakistani company to receive these licenses.

Under the said license from MPP, Remington Pharma will be manufacturing and commercializing generic versions of the molnupiravir 200mg Capsules (RLD: Lagevrio, Merck & Co.) to 105 countries and nirmatrelvir/ritonavir (RLD: PAXLOVID™, Pfizer) with the approval and authorization from MPP to manufacture and supply in Pakistan and export to 95 countries.

Dr. Abdul Qadeer Khokhar, Chairman, Remington Pharmaceuticals said, *“Remington Pharmaceuticals has been at the forefront of supplying quality-assured, cost-effective medicines in Pakistan and to other low- and middle-income countries (LMICs) for over 40 years, and now this is a step towards taking our efforts truly global. After recently becoming the first nationally-owned pharmaceutical company to attain the World Health Organization (WHO) Prequalification (Geneva HQ), this is another moment of pride for us that Remington Pharmaceuticals has become the only pharmaceutical company from Pakistan to receive these licenses in a competitive landscape where majority of the other licensees are from India.”*

With the presence of the licensed generic product at affordable prices, we as a country should take this as an opportunity to move towards promoting quality pharmaceutical manufacturing in the country. This will surely bring Pakistan on the map of global Pharmaceutical Industry.

Remington Pharma has already obtained the formulation of Transfer of Technology, from the originators, for the development and manufacturing generic versions of the revolutionary treatments against COVID-19. However, Remington considers its foremost duty to make this treatment available to the people of Pakistan on a priority basis.
